DENTAL VENEERS: UNITING TRADITION AND TECHNOLOGY

www.swanhillsmiles.com.au

INTRODUCTION

A confident smile is quiet power. It changes the way you walk into a room, how you feel in photographs and even how you connect with people in everyday conversation. For those with chipped, stained, uneven or worn teeth, dental veneers have long been one of the most trusted solutions in cosmetic dentistry — and the way they’re designed and applied today is a remarkable combination of time-honored technique and modern technology.

WHAT ARE DENTAL VENEERS?

Veneers are thin custom made shells that are bonded to the front surface of your teeth. They are usually made from porcelain or composite resin. They’re designed to look like natural tooth enamel and are used to correct a wide range of cosmetic problems—from minor discolouration and chips to gaps and misalignment that don’t need full orthodontic treatment.

Veneers have been around for decades and used by dentists for decades. What has changed dramatically is the precision, the materials and the technology involved in creating them – making today’s veneers look much more natural and last longer and feel more comfortable than earlier versions.

WHERE MODERN DENTISTRY MEETS TRADITION

The basis of great veneer work has always been the same – careful assessment, attention to detail and an understanding of what each patient actually wants from their smile. That human factor of dentistry, the listening, the relationship between patient and clinician, is as much at the heart of things today as it ever was.

What technology has brought to that tradition is an extraordinary precision. Digital smile design tools allow dentists to preview results for patients before any work is undertaken. With advanced imaging, each veneer can be custom designed to fit the patient's unique facial features in exact shape, size and shade. The high quality of ceramic milling technology produces restorations with remarkable accuracy, reducing chair time and improving long term results.

If you’re looking for Veneers Swan Hill, this combination of old-fashioned care and modern technique means you no longer have to compromise between a personalised experience and clinically accurate results. You can have it all.

PORCELAIN VS COMPOSITE VENEERS

A very common question patients ask is whether they should go with porcelain or composite resin veneers. Porcelain veneers tend to be more durable, stain-resistant and natural-looking, in that they reflect light much like real tooth enamel. Composite veneers are a little less durable, but can often be done in one visit and are easier to repair if they chip.

A trained cosmetic dentist will explain both options to you in a way you can understand so you can make an informed decision without feeling pressured.

WHAT TO EXPECT DURING THE PROCEDURE?

The process usually requires two to three appointments. During the first visit, your dentist will examine your teeth, talk about your aims and plan the treatment. Then, your teeth will be prepared by removing a small amount of enamel to ensure a natural fit and impressions will be taken for the dental lab. When your custom veneers are ready, they are carefully bonded to your teeth and adjusted for an ideal bite and look.

BOTTOM LINE

Veneers Swan Hill provide a perfect mix of the finesse of artisan dentistry and the clinical precision of modern dentistry for smile makeovers that look completely natural and are built to last. Swan Hill Smiles is committed to providing quality dental care in a friendly, relaxed environment.
